

AS 4. The truck/trailer box sidewall of claim 2, wherein the side rails are integral with the inside side skin of the bottom sidewall panel and project laterally from the inside, vertical side skin.

11. A truck/trailer box, comprising:
a pair of horizontally elongated bottom sidewall panels, each having a top edge, a bottom edge, inside and outside, vertical side skins, and a plurality of vertically spaced
5 apart, horizontal webs interconnecting the side skins vertically between the top and bottom edges;

Al 10 said side skins and said webs together defining a plurality of horizontally elongated inner spaces and each said bottom sidewall panel, each said inner space being defined horizontally between the two side skins and vertically between two webs;

each bottom sidewall panel including a horizontally elongated upper side rail extending laterally inwardly from the inside side skin of the sidewall at a location spaced
15 above the bottom edge;

each bottom sidewall panel also including a lower horizontally elongated side rail extending laterally inwardly from the inside side skin of the sidewall panel at a location spaced below the upper side rail, wherein the two side rails
20 and the side portions of the sidewall panel extending between the side rails form inwardly opening longitudinal channels, and end portions of the transverse bottom beams are received within said channels; and

a plurality of longitudinally spaced apart, transverse floor beams having opposite end portions that are situated in said nooks.
